A textbook of organic chemistry bahl

Organic Chemistry owes its name and origin to the study of those substances which had been produced in living organisms, whether vegetable or animal. Such substances were classed as organic in distinction to those which were derived from the mineral world and were known as Inorganic. Modern Definition of Organic Chemistry : With the fall of the Vital force theory, the term 'organic' lost its original significance. It was, however, established that all the so-called organic compounds contained carbon as an essential constituent. Therefore, the name 'organic' has been retained to describe all carbon compounds irrespective of their origin or the method and preparation. Thus in modern practice the term Organic Chemistry is defined as the study of the compounds of carbon, the study of the elements and their compounds falling under the scope of Inorganic Chemistry. However, a few common compounds of carbon like carbon monoxide, carbon dioxide and carbonates are still classed as inorganic substances for obvious reasons. Thus the modern definition of Organic Chemistry could be given as the study of compounds of carbon other than the oxides, carbonates and bicarbonates, and hydrogen cyanide and its salts. REASONS FOR SEPARATE STUDY The organic compounds obey the same fundamental laws of Chemistry that hold for inorganic compounds. However, they are studied as a separate branch of Chemistry as a matter of convenience mainly for two reasons : (1) The total number of organic compounds known is about 20,00,000, which exceeds several times the total number of inorganic compounds which is hardly 50,000. If the study of twenty lakhs of carbon compounds be included with that of carbon in Inorganic Chemistry, it would throw the subject out of balance. (2) There are marked differences between the composition, structure and behaviour of the organic and inorganic compounds which make their separate study more fruitful. Buy The New Edition Of books Online CONTENTS – 1. Introduction. 2. Purification of Organic Compounds. 3. Composition of Organic Compounds. 4. Empirical and Molecular Formulae. Determination of Molecular Weights 5. Structure of Organic molecules. Classical Concepts. 6. Structure of Organic Molecules. Modern Concepts 7. Isomerism 8. Organic Reactions and Their Mechanisms. 9. Classification and Systematic Nomenclature. 10. Alkanes. 11. Alkenes. 12. Alkynes. 13. Halogen Derivatives. 14. Organo-Metallic Compounds. 15. Aliphatic Alcohols. 16. Aliphatic Aldehydes and Ketones. 17. Thiols and Thioethers. 18. Ethers. 19. Aldehydes and Ketones. 20. Carboxylic Acids. 21. Dicarboxylic Acids. 22. Substituted Acids. 23. Acid Derivatives. 24. Esters. 25. Acetoacetic Ester and Malonic Ester. *and more 27 Topics are available in PDF We use cookies to remember your preferences such as preferred shipping country and currency, to save items placed in your shopping cart, to track website visits referred from our advertising partners, and to analyze our website traffic.
